

Docker setup for windows:

\*\*\* Please note that even if you are using docker via the command line/powershell, in order for the docker daemon to be running docker desktop has to be open.

1. Download docker desktop

- <https://www.docker.com/products/docker-desktop/>
- Click Windows and it should automatically start downloading

- Once it's downloaded click on the file, and follow the install wizard

\*\*\* If you are going to use the Auto Run script you may not even need this step

2. Install git

- <https://git-scm.com/download/win>
- Click 64-bit Git under the Standalone Installer header

- Once it's downloaded click on the file, and follow the install wizard

3. Follow instructions for WSL (if prompted once docker installs)

<https://docs.microsoft.com/en-us/windows/wsl/install-manual>

- Step 6: Install your Linux distro of choice -> shouldn't be necessary unless you plan to use it outside the course
